Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Fibrin Its Origin and Development in the Animal Organism, and Its Relation to Life, Health, Longevity, and Disease, an Incontrovertible Argument in Favour of the Hydropathic System Life consists of waste and supply, action and extinction; living substance assuming the state of death, and dead materials, by the laws of vitality, the condition of life. In a galvanic battery, so long as the zinc water and acid continue to be supplied, the current is maintained; but when the elements of development are used up, all electrical action ceases. Now, animal life, according to Liebig, emanates from the union of oxygen with blood and nutritive substances, producing the elimination of carbonic acid. But when oxygen or nutritive matters cease to be supplied, of course life becomes extinct. In addition to the above definition of life, we may further add that, in the higher animal and vegetable structures, its maintenance is specially dependent upon the encasement and protection of the living organism from the direct influence of those elements and forces which serve to excite and stimulate it to action. It is by this encasement that the interior substances and liquids of the body are preserved in their original integrity and power, probably as electro-chemical elements. In order to show the necessity for this encasement, we may remark that in living animals and vegetables, whilst it remains entire, vital action continues to be manifested; but when it is removed, death ensues. Even in fruits, peas, and other vegetables, when separated from the parent stem, a sort of waning vitality is still preserved for a time. But the moment the corticle - skin, peel, rind, or husk, c....
